

Gotcha Day Puppy Benefits

All of our puppies are given parasite preventatives at 2, 4, 6, and 8 weeks old. All puppies receive their first DHPP vaccine between 7 and 8 weeks of age.

At 8 weeks old your puppy will be microchipped through Fi Nano. Their microchip will be registered to our program until you transfer it in your name. A microchip information sheet will be inside of your puppy's gotcha day folder explaining how to do that along with more information regarding your puppy's microchip.

A copy of your puppy's health record detailing when they were given parasite prevention and what medication it was will be listed on the health record. You'll also receive a record sheet with the vaccination your puppy was given.

Your puppy's AKC registration application paperwork will be in there as well if you'd like to register your puppy through the AKC.

Adopters will receive a copy of their puppy's litter certificate from the AKC.

Your puppy's parents were DNA tested through Embark vet proving their purebred status. A copy of your puppy's parents DNA tests will be provided.
